

METHOD FOR VISUALIZING MULTIDIMENSIONAL DATA

ABSTRACT OF THE DISCLOSURE

According to the invention, visualization and analysis of multidimensional data is performed in an automated environment. Embodiments according to the present invention are especially effective for analyzing the course of clinical procedures, but it is not only limited to these types of applications. The present invention can also be applied to healthcare risk analysis for many factors, analyses of industrial production control, and any analyses using multidimensional data. The present invention provides systems, methods and software that can be used to distribute and share the results of analyses.
